

LOOM WALKTHROUGH · SALES DEMO

Alphard. Run Expansion like a pipeline.

A scene-by-scene script for a 5–7 minute Loom walkthrough — what to say, what screen to share, and how to position against the tools your prospect already owns.

AUDIENCE

VP Sales / CRO / Head of AM
at multi-product B2B SaaS

RUNTIME

6–7 minutes
(3-min cutdown included)

GOAL

Earn a sandbox-trial reply,
not a discovery call

Before you hit record

Five minutes of prep makes the difference between a demo that lands and one that feels rehearsed-but-flat. Run this once dry, then record on the second take.

SETUP

- 1440×900 browser window — Loom's native frame. Hide the dock and bookmarks bar.
- Sign in once before recording so the personalised state ("Welcome, Joe") is cached.
- Light theme on the marketing pages, dark theme on the workspace — the contrast reads better on Loom compression.
- Camera bubble bottom-right, never covering the sidebar or hero copy.
- Pause one beat after each click. The animations *are* the demo — let them play.

SECTION 01 The hook

0:00 — 0:25

ON SCREEN

- Your face only, no screenshare. Look directly at the camera.

SAY

“Hey — I'm Pragyan, founder of Alphard. Quick context before I show you the product.”

“Every B2B SaaS company I talk to has the same broken loop. Net new pipeline is run like a machine — Salesforce, sequencers, dashboards, the works. But the moment a deal closes and an Account Manager takes it over, it falls into a spreadsheet. Renewal risk, expansion plays, champion changes — all tracked in someone's head or a Notion page from 2023.”

“Alphard fixes that. We turn your installed base into a ranked pipeline your AMs work every morning. Let me show you.”

Stage cue: Smile, pause one beat, then switch to screenshare.

SCREEN — ALPHARD.GLOBAL LANDING PAGE

Hero headline · integrations strip · animated Revenue Agent chat

CLICK PATH

- Land on the hero — read the headline aloud once.
- Scroll past the integrations strip (Salesforce, HubSpot, Gong, Slack, Zendesk, Snowflake).
- Pause on the animated chat showing "What changed at Cloudflare this week?"

SAY

"Two-second framing. We are not a CS platform. We are not a CRM. We sit on top of your CRM, your product telemetry, your support data, your calendar, and your email — and we tell your AMs which accounts are heating up, why, and what to do next."

"Same operating model your AEs already use. Just pointed at the customers you've already won."

SCREEN — /HOME (AM PERSONA)

Featured Play card · ranked PlayRow · pipeline strip · activity feed

CLICK PATH

- Click "Launch demo" → quick onboarding → land on /home.
- Show the "Welcome, Joe" personalisation (proves it's a real product, not a video).
- Hover the top Featured Play card — heat score and reason chips visible.
- Click **Draft follow-up** on Cloudflare — let the ExecutionDrawer animate end-to-end.

SAY

"This is what an AM sees at 8am. One ranked list. The top account today is Cloudflare — heat score 94. The reason chips tell me exactly why: usage spiked 38% on the security module, their VP of Eng accepted a meeting yesterday, and the renewal is 71 days out. I don't need to go digging in five tabs to figure that out."

"Watch what happens when I click 'Draft follow-up.'"

Stage cue: Drawer animates — pulling context → drafting → ready. Don't talk over it.

THEN SAY

“It's pulling the last three calls from Gong, the open support tickets, and the product usage delta — and drafting an email I can send in 30 seconds. This is the AM's morning. One screen, one decision, one action.”

SCREEN — /PORTFOLIO

Health × Expansion potential · ARR-sized bubbles · per-quadrant plays

CLICK PATH

- Sidebar → Portfolio.
- Hover one bubble in each quadrant — show the tooltip (ARR, owner, signals).
- Click the Save & Grow quadrant header — side panel slides in with the recommended play.

SAY

“This is where managers live. Every account in the book plotted on health and expansion potential. Top right — Strategic Growth. Top left — Steady State. Bottom right is the interesting one: Save and Grow, accounts that are unhealthy but have huge expansion ceiling. That's where you put your best AM, not your newest.”

“The size of the bubble is ARR. Hover gives you context. And every quadrant has a recommended play, so the answer to 'what should the team be doing this quarter' is built into the screen, not a slide deck.”

EXPANSION THESIS

\$720K ARR today. Path to \$936K via \$215K active pipeline.

Pipeline cover to FY26 target 100%

Top play: Revenue Intel · \$120K · Proposal

Hero stat strip · Account Brief · Lifecycle Baton (AE → AM → CSM)

CLICK PATH

- Click any bubble in Portfolio → land on /accounts/cloudflare-inc.
- Read the hero stat strip out loud once: ARR, NRR, expansion property, renewal date.
- Scroll to the Account Brief — TL;DR, stakeholder coverage, expansion thesis, risks.
- Click **Trigger handoff** on the Lifecycle Baton — drawer animates the handoff package.

SAY

“This is the account workspace. Forget the tabs for a second — look at the brief at the top. This is everything a new AM would need to take over this account in 90 seconds. The thesis. The stakeholder coverage. The risks. The recommended next moves — and every one of those is wired to an action.”

“The bar above is the lifecycle baton. AE handed off to AM three months ago. AM is about to hand off to CSM for renewal. Watch what 'Trigger handoff' actually does.”

Stage cue: Drawer builds the handoff package on screen.

THEN SAY

“Pulls the deal context, the account plan, the open commitments, drops it into a Slack channel with the CSM. The handoff that used to be a 30-minute call and a Notion page is now a button.”

SCREEN — /ACCOUNTS/CLOUDFLARE-INC · GROWTH PLAN TAB

ARR ladder · quarterly bets · stakeholder coverage matrix · pipeline cover %

CLICK PATH

- Click the Growth Plan tab on the same account.
- Walk left-to-right across the ARR ladder, calling out the bet stacked into Q+2.
- Point at the stakeholder coverage matrix — one role intentionally uncovered.
- Read the pipeline cover ratio at the bottom: 1.4x — under-covered.

SAY

“This is the part that replaces the spreadsheet every AM keeps on the side. Four-quarter expansion plan, per account. ARR ladder, the bets stacked into each quarter, the stakeholder coverage matrix so you can see at a glance you have no economic buyer covered for the Q3 expansion play.”

“Pipeline cover is 1.4x — under-covered. The AM knows exactly what's missing. The manager rolls this up across the team without asking anyone to update a slide.”

Product × Department grid · gap cells · "Build expansion case" CTA

CLICK PATH

- Scroll down to the White Space section, or click the tab.
- Hover one active (green) cell, one trial (blue), one expansion target.
- Click a faint gap cell — the CellDetail expands with estimated ARR, confidence, pattern matches.
- Scroll into the Recommendations panel below; hover the "Build expansion case" CTA.

SAY

“Multi-product accounts only. This is the white-space matrix — every product in your catalog versus every department at this account. Green cells are sold. Blue is trial. The faint cells are gaps — money you haven't asked for yet.”

“Click any gap and we tell you the estimated ARR, the confidence based on pattern-matching against similar accounts who did adopt, and a one-click 'build the expansion case' that drafts the business case with comparable wins and ROI math.”

Activity 23 signals this week

All signals >

Champion-change detection · usage spikes · renewal events

CLICK PATH

- Back to /home, scroll to the Activity feed.
- Point at the Today / Yesterday / Earlier this week grouping.
- Click the "Champion change detected" row — drawer opens with a recovery play.

SAY

“Last thing on the AM workflow. Activity feed — what changed overnight on the book. The big one is here: champion change detected at Snowflake. Their VP of Data, the person who sponsored the deal, just updated her LinkedIn — she's at Databricks now.”

“That's the kind of signal that used to surface six weeks late, in a churn post-mortem. We catch it the day it happens, and surface a recovery play before the renewal conversation gets weird.”

SCREEN – MANAGER PERSONA, /CAPACITY

Team workload heatmap · roll-up of expansion pipeline by quadrant

CLICK PATH

- Profile menu (top-left of sidebar) → switch persona to Manager.
- Land on the manager home; scroll to Team Capacity.
- Optionally click into /capacity for the full heatmap.

SAY

“Quick manager view. Same data, different lens. I see my team's capacity, who's overloaded, where the at-risk ARR is concentrated, and what the rolled-up expansion pipeline looks like by segment. This is the dashboard the CRO actually wants in the QBR — not a Salesforce report someone updated at midnight.”

SECTION 10 How we're different

6:00 – 6:45

By this point the prospect has seen the product. The natural objection in their head is "*why not just use Gainsight / DemandFarm / Salesforce?*" Address it head-on. Don't attack the incumbents — slot in next to them.

ON SCREEN

- Cut to a single comparison slide (build it once in Keynote — layout below).
- Or stay on the manager home and bring your camera bubble bigger; the table is short enough to deliver verbally.

TOOL	WHAT IT DOES	WHERE ALPHARD SLOTS IN
Gainsight, ChurnZero, Catalyst CS PLATFORMS	Health scores, NPS, success plans, retention dashboards. Built for CSMs, optimised for renewal risk.	Different audience and different job. They tell you an account is unhealthy. They don't tell your AM where the next \$200K of expansion is hiding.
DemandFarm, Kapta, Revegy KEY ACCOUNT MANAGEMENT	Org charts, white-space maps, account plans. Static planning surfaces an AM updates once a quarter.	We respect the planning layer. We add the daily signal layer on top — so the plan actually drives action between QBRs, not just inside them.
Salesforce, HubSpot CRM / SYSTEM OF RECORD	Stores opportunities, contacts, activities. Source of truth for the data, not a workflow surface.	CRM tells you what happened. We sit on top and tell your AM what to do at 8am — a ranked queue with reasons, not a filterable table.
Clari, Boostup REVENUE / FORECAST	Pipeline analytics, forecast roll-ups, deal inspection. Optimised for the CRO's forecast call.	They aggregate up. We prescribe down — per account, per AM, per morning. The forecast is the output, not the workflow.
Gong, Outreach, Salesloft SINGLE-SIGNAL POINT TOOLS	Conversation intelligence, sequencing, deal warnings. Each is one strong signal source.	We fuse them — usage + calls + support + calendar + LinkedIn — into one heat score per account, every reason explained.
Alphard EXPANSION PIPELINE LAYER	Ranked daily queue of accounts with explainable signals, per-account plays, and roll-ups for managers.	The expansion-pipeline layer that doesn't exist in any of those tools. If your AMs run a spreadsheet plus seven tabs, we are the replacement for that stack.

SAY (VERBATIM)

"Quick word on where we sit, because you're probably thinking about a few other tools right now."

"**Gainsight, ChurnZero, Catalyst** — those are CS platforms. Built for CSMs and retention. They'll tell you an account is unhealthy. They will not tell your AM where the next \$200K of expansion is hiding. Different audience, different job."

"**DemandFarm** and the older Key Account Management tools — they're planning surfaces. Org charts and white-space maps that someone updates once a quarter. We respect the planning layer; we add the daily signal layer on top of it, so the plan actually drives action between QBRs."

"**Salesforce or HubSpot** — that's the system of record. It stores what happened. It doesn't tell your AM what to do at 8am. We sit on top of it and turn the data into a ranked queue."

"**Clari, Gong, Outreach** — forecasting, conversation intelligence, sequencing. Each one is a single signal source. We fuse them — usage, calls, support, calendar, LinkedIn — into one heat score per account, with the reasons explained."

"The honest answer to 'what is Alphard?' is: we're the expansion-pipeline layer that doesn't exist in any of those tools. If your AMs are already a spreadsheet plus seven tabs, that's us, replaced with one screen."

Stage cue: Calm tone, not defensive. You're acknowledging the prospect already owns these tools and showing where you slot in — not telling them to rip and replace.

SECTION 11 The close

6:45 – 7:15

ON SCREEN

- Cut back to your face. Or stay on the manager home for visual continuity.

SAY

"That's the demo. Three things to take away."

"One — your AMs already do this work. They just do it in spreadsheets and Slack DMs. We're not adding overhead, we're replacing the cobbled-together stack they've already built."

"Two — every signal is explainable. No black box. Every heat score has reason chips, every recommendation has evidence. AMs trust it because they can see why."

"Three — this is built for companies with multi-product catalogs and 50+ AMs. If that's you, the white-space alone usually pays for the platform in the first quarter."

"If this resonated, hit reply and I'll send you a sandbox you can play with for a week — your name on it, real-looking accounts, no sales call required. Thanks for watching."

Objection-handling cheat sheet

If they push back after watching, here are the rebuttals — keep one or two of these in your back pocket. Each is short enough to drop into a Slack reply or a follow-up email.

"We already use Gainsight."

Great — keep using it for renewal risk and CSM workflows. Alphard is for the AM team running expansion plays. Different motion, different audience. The two coexist; we read the same telemetry, we surface a different action.

"Our CRM has expansion fields."

So does every CRM. The question isn't whether the field exists — it's whether your AMs work that field every morning. They don't. They work email and a private spreadsheet. Alphard turns the CRM data into a queue they actually open.

"DemandFarm already does white space."

Static white-space, yes. Ours is signal-driven — we tell you which gap to chase *this week* based on usage patterns and stakeholder moves, not a quarterly planning workshop. It's the difference between a map and a GPS.

"We don't have AMs, just CSMs who do expansion."

Fine — flip the persona to CSM and the same product reframes. The Hot List becomes a save-and-grow queue. The Growth Plan becomes a success-plus-expansion plan. The signals are the same; the language is what changes.

"How long is implementation?"

Days, not quarters. We connect to Salesforce, Gong, your product telemetry, calendar, and email through standard integrations. Most teams are running on real data inside a sandbox in a week, in production within a month. There is no professional services engagement.

"What's the ROI math?"

Two ways. Bottom-up: AMs spend ~6 hours a week stitching together context. Cut that in half and you reclaim ~150 hours per AM per year. Top-down: a 3-point lift in expansion attainment on a \$40M expansion target is \$1.2M of incremental ARR — usually 5–10x platform cost.

Pre-flight checklist

Run through this once before recording. If any box can't be ticked, fix it before pressing record — re-shoots cost more time than prep.

- ☐ Sign-in flow completed; cache shows your real name
- ☐ Light theme on marketing pages
- ☐ Dark theme on workspace pages
- ☐ Browser zoom at 100%
- ☐ Bookmarks bar hidden
- ☐ Every other tab closed
- ☐ Camera bubble bottom-right, not over content
- ☐ Mic checked, no background noise
- ☐ Screen resolution 1440×900
- ☐ ExecutionDrawer flows tested once for timing
- ☐ Comparison slide / Keynote frame ready for Section 10
- ☐ Demo URL in clipboard, ready to send
- ☐ Mac notifications muted (Do Not Disturb on)

Cuts & variants

If you need to hit 3 minutes

Drop in this order — keep the rest at all costs:

- ☐ **CUT** Section 7 — White Space (only relevant for multi-product prospects)
- ☐ **CUT** Section 9 — CRO view (skip unless pitching a manager)
- ☐ **CUT** Section 4 — Portfolio (replace with one screenshot, no live click)
- ☐ **CUT** Section 10 — How we're different (compress to one sentence: "we sit between your CRM and your CS platform")
- ☐ **KEEP** Section 1 — Hook (carries the framing)
- ☐ **KEEP** Section 3 — Hot List (carries the daily-workflow pitch)
- ☐ **KEEP** Section 5 — Account Brief (carries the depth-of-product pitch)
- ☐ **KEEP** Section 11 — Close (carries the CTA)

For a CSM-led org

Swap Section 3's example from "renewal in 71 days" to "usage dropped 22% on the analytics module" and frame it as save-the-account, not expand-the-account. In Section 10, lead with the Gainsight comparison — it's the tool they actually own.

For a single-product company

Skip Section 7 entirely. Lean harder on Sections 5 and 6 — make the Growth Plan the centrepiece. In Section 10, drop the DemandFarm row — they likely don't know what KAM tools are.

If a CFO is in the room

Add a 30-second tail after Section 9: *"Here's the math. If your AM team books \$40M of expansion this year and we lift attainment 8%, that's \$3.2M of incremental ARR. Our list price for a team your size is well under that."*
